Part 2

Write two differences between ArrayList and LinkedList.

ArrayList	LinkedList
The search operation is faster in ArrayList compared to linked list O(1). The insert and delete operation is slower in array list. O(n) in worst case.	The search operation is slower in linked list. O(n). Insert and delete operation is faster in linked list. O(1).
It is implemented using a dynamic array to store elements.	It is implemented using a doubly linked list to store the elements.
